DESCRIPTORS: *Comets, Carbon compounds, Ions, Abundance, Astrophysics.

The comparison of the intensities of the (2-0) bands of CO+ (in the tail) and the (0-1) bands of CN (in the head), at various distances from the nucleus, in Bester's Comet (1957d) has allowed the determination of the relative abundances of CO+ and CN at less than 130,000 km from the nucleus. It is found that the abundance of CO+ in the tail is 30 to 40 times greater than that of CN in the head. If the abundance for CN is taken equal to that suggested for C2 by Swings, it is found that in the region of
